## 1.2 Dataset set-up

### 1.2.1 Bag of Words preprocessing

This is a Bag of Words preprocess approach. I will use 2 CountVectorizer from sklearn to change title and description to two 2 vectors and then concatenate them together. In the rest of this notebook, I will use cross-validation instead hold-out. Therefore, I will join the validation set with training set.

**NOTE:** I don't add the length of description (and the title) because it has a big deviation which may cause noise.

```

```

Check training dataset'shape: (659, 3704) (659,)
